Subject: clarification on Wed night council meeting

Hi Joe,

I am seeking some clarification from last night's meeting. You said West Side Soils won't include the Flat because the data for the Flat shows action levels are below standards set for Butte. But I've been reporting since September that West Side Soils includes the Flat and EPA has never asked for a correction nor ever tried to refute that.

Can you explain why?

Further, you said last night that the remedial investigation is getting ready to start next year. In a list of interview questions I sent in October on West Side Soils, EPA said the following in response to a question I posed about sampling Blacktail Creek east of Lexington Ave. for

West Side Soils:

The RI workplan will identify what areas will be sampled and **may include areas east of Lexington**. The draft RI workplan will be finalized prior to the RI.

Also, correct me if I'm wrong, but it was my understanding from talking to you last night that for West Side Soils EPA is only looking at soil – not at surface or groundwater?

If that is true, EPA said in response to my October query: The RI is likely to include soil, groundwater, and surface water sampling.

Can you clarify?

Did I hear you correctly as saying that EPA has known people are out there in West Side Soils riding their dirt bikes?

Did I get this correct: "There are waste piles in West Side Soils that exceed recreational levels." What are the recreational levels for lead and arsenic in Butte?

You said EPA has been trying for the last few years to address West Side Soils but due to the hiring freeze and administration change it's been put off. But the hiring freeze and administration change all happened in 2017. Was there a hiring freeze prior to 2017?

Why didn't EPA address West Side Soils earlier than a few years ago?

Also, after your presentation, one of the commissioners said someone from Denver EPA is coming to address the council in Jan. on West Side Soils. Can you all confirm this?

Deadline end of day.

Thanks,

Susan
